

AURORA SLIDES

After the request for aurora slides in *TML* 39, **John Short** wrote: "Amazingly just days before, I bought a box of astronomy slides and two aurora images were included. Unfortunately there is no identification mark on these slides. The set I bought is 'Astronomical photographs taken at the Lick Observatory' (lecture: York & Son, 36 slides, 1895) of which slides 15, 16, 23, 24, 33 and 35 are missing. If any member has those slides and wishes to sell them I'd be very interested. The original lecture notes, or a copy, would also be helpful. I would like to create a YouTube movie of the set. I am also missing slides from another set – 'Astronomy' (lecture: York & Son, 300 slides, in/before 1888) in three parts."
